Presentation

The **Dio-ES**, is the first product in the range, provides a link for 64 bi-directional EtherSound™ audio channels between two InnovaSON DSP cards giving you the ability to share audio resources between one or more InnovaSON consoles. This interface can be used either to access up to 64 channels of audio from external devices via EtherSound, or to connect to a second InnovaSON Stage Box.

! CAUTION !

This upgrade kit contains components that may be damaged by electrostatic Discharge.

Before any manipulation, all standard ESD precautions must be taken when servicing.

! ESD !

This Upgrade kit must be servicing by experienced & qualified technicians.
