Big John Power Supply

Big John

Power Supply

Bigger power supply for effect pedals from CIOKS with 7 outlets. All outlets are with well filtered, regulated, common ground 9V DC and yield a maximum current of 600mA. Good choice for a slightly bigger setup or board, but with no exotic pedals with non standard operating voltage. Big John is able to supply the Mod- or TimeFactor Eventide pedal, Alesis FX or Octavius Squeezer from Chunk Systems, just to name a few higher current 9V DC pedals. A few pedals from Moog also need 9V DC with a quite high current, where the Big John would be a good choice.

The red Power LED shows if the power supply is connected to mains. The green Check indicator warns you about overload or short circuit. A glance and you know everything is all right.

Features:

- great selection of Flex cables as accessories
- two LED status indicators (Power and Check)
- overload and short circuit protected
- durable
- 2m mains cable
- 7 Flex cables included

Specifications:

Output voltage: 7x9V DC (regulated)

Output current: max. 600mA total from all 7 outlets

Â

Size: 130x75x40mm

Weight: 550g
