Chrome webmidi interface

DSP Midi Settings

Behringer DSP 8000 / 8024 / 9024 remote software are not working since XP !! (midi layer problem)
but only on Win95 to Win2000 !!

Here is a way to remote DSP8024 **v1.3** using **WebMidi** impemented in **Chrome** browser

++++++++++++++++++

DSP 8000 8024 / 9024 via web midi / chrome (DSP **FW 1.3 Only)**

How To Enable WebMIDI
WebMIDI is not yet available in all browsers. As of 5/8/15, it is only available in Chrome.
If you have Chrome V43 then it is enabled by default.
In earlier versions of Chrome you will have to enable it as follows:

Open a new tab in Chrome.
Copy this text: chrome://flags/#enable-web-midi
Paste that text into the Chrome address bar.
Select "Enable" link under the "Enable Web MIDI API" item.
Plug in a MIDI keyboard using USB.
Restart the Chrome browser.

You can test WebMIDI on this page: http://www.softsynth.com/webaudio/midi_devices.php

source: http://www.softsynth.com/webaudio/webmidi.php

Then check your midi device is the default one into chrome
then check security / privacy rules for midi access

++++++++++++++
Using "MidiOX" we can "DUMP memory" and then reload all presets at once
useful for battery replacement !!
