CREATION AUDIO LABS

FUNKULATOR™

Thank you for purchasing the Funkulator™ Bass Tone Shaper! At Creation Audio Labs, we love bass. For some of us, it's kind of an obsession. We hope that the solutions we find will also help you on your quest for great tone!

DESCRIPTION

The Funkulator is a problem solver.

Problem #1: EQ settings that sound great when playing finger-style, or pizzicato, don't usually work as well when the player switches to more percussive playing (slapping, popping, thumbing, thumping or whatever your favorite nomenclature may be). Due to the percussive nature of these techniques, certain midrange frequencies sound harsh or "clanky". Cutting the offensive frequencies and providing a subtle boost in the lows and highs gives us that glassy, modern, hi-fi slap tone we all know and love.

Problem #2: Contour controls on amps that provide mid-cut aren't necessarily that useful for great slap tone. The frequency points of the Funkulator have been carefully selected for this purpose.

Not only is the Funkulator great for slappers, but using it for finger-style playing provides a smoother, more hi-fi tone. Playing with a pick, the sound is more metallic. Try it with your favorite Distortion or Overdrive pedal!

DIRECTIONS

Operation of the Funkulator is simple – an on/off switch and one EQ control. Input is received via the ¼' jack on the right and signal is output from the ¼" jack on the left. Turn the circuit on with the switch. The yellow on/off LED will light. Play and simply adjust the amount of EQ curve desired with the EQ control. As you turn the control clockwise, the mid frequencies will dip and you will hear a slight increase in lows and highs. Clockwise is max Funkulation. Enjoy!

POWER REQUIREMENTS

9vDC tip negative power supply, minimum 90mA.

CONTROLS

- Footswitch toggles on/bypass (yellow LED indicates on)
- Knob adjusts extremities of EQ change. (Amount of Funkulation)

WARRANTY

All Creation Audio Labs products carry a 1 YEAR warranty against any manufacturer defects. Please visit our website for more information.
