FACTORY PRESET CONTROLLER FUNCTIONS

The following table lists the real-time controller functions in each ***SESSIONS*** preset. The real-time controllers adjust important aspects of the sound. Using the real-time controllers, you can synthesize a wide range of timbres without any programming knowledge. These controllers are PERFORMANCE controls, designed to be actuated while playing to add expression and feeling to your music.

Often a controller adjusts several parameters at once to achieve a desired effect. On some presets the controls are somewhat standardized. A quick glance at the chart shows that MIDI Controller A is often used to control the Filter Cutoff (Fc). Likewise, MIDI Controller C often controls the envelope times.

- If you find a set of slider settings that you like better than the factory settings, go to Preset Edit, Global and adjust controllers A-D. Then save the bank back to itself.
- MIDI Controllers A-D correspond to the realtime control sliders on E-Synth. The Thumby button can be accessed on an Emulator or E-Synth rack unit by using a footswitch assigned to MIDI controller 66 on your MIDI keyboard. (*Controller #66 is the default for the Thumby button.)*
