Ten green apples on the tree; Good for you, good for me
Good for everybody round the tree

Introducing the SYNTHI AKS

E.M.S. are delighted to announce **the SYNTHI AKS.** We are confident that our newest compact synthesizer is the most advanced electronic music instrument available anywhere today. The SYNTHI AKS has many more facilities than any other portable synthesizer and has unique features not found even on the largest synthesizers; it is also remarkably easy to use.
The SYNTHI AKS has all the devices needed for it to be used as either a compact **electronic music** studio or as a comprehensive **live performance** music instrument. Programming is simply and quickly done with a pin panel which allows any electronic combinations and avoids the clutter of patchcords. A programme can also be made into a "Prestopatch" which can be plugged in to reproduce the sound or effect **instantly.**

We make the SYNTHI — you make the sound.
The Touch Keyboard is entirely electronic with no mechanical parts to wear out or get dirty. We have even managed to make the loudness of a note depend on how hard you play it, although the key itself does not move. Perhaps the most exciting feature of the SYNTHI AKS is the Digital Sequencer: a revolutionary circuit which **remembers** up to 256 notes as they are played and which can then replay them at any pitch or speed. You can even accompany your already recorded sequence, and there is a Random Generator in case you are not sure what to play!
With a conventional instrument such as guitar or organ, the SYNTHI AKS allows you to make fuzz, wah-wah, reverberation, ring-modulation, octave splitting, sustain and phasing as well as a huge range of other sound effects. Any sound you make can be recorded permanently specially for you in a "Prestopatch" — you just send us your patch.

Think of a sound — now make it.
The SYNTHI AKS comes to you in a strong briefcase weighing 25lb, complete with stand, three prestopatches, plugs and leads, and a comprehensive Instruction and Electronic Music Manual. Can you afford to be without it?

EVERYBODY NEEDS A SYNTHI
